BICYCLE BRAKE DEVICE

ABSTRACT OF THE DISCLOSURE

SJD
BI

A cable connecting apparatus for a control cable having an inner wire that slides within an outer casing includes a cable sleeve adapted to receive the outer casing of the control cable; a guide having a first end portion and a second end portion, wherein the guide supports the cable sleeve so that the cable sleeve moves toward the first end portion and the second end portion; and a biasing device for biasing the cable sleeve toward the second end portion of the guide. A connecting apparatus for a first control cable having a first inner wire that slides within a first outer casing and a second outer casing and a second control cable having a second inner wire that slides within a third outer casing and a fourth outer casing includes a bracket including a first support for supporting the first outer casing; a second support for supporting the second outer casing spaced apart from the first outer casing; a third support for supporting the third outer casing; and a fourth support for supporting the fourth outer casing spaced apart from the third outer casing. A connecting member is provided for connecting a portion of the first inner wire located between the first outer casing and the second outer casing to a portion of the second inner wire disposed between the third outer casing and the fourth outer casing, wherein the connector moves together with the first inner wire and the second inner wire. A position confirmation means is provided that allows the position of at least one of the first outer casing, the second outer casing, the third outer casing and the fourth outer casing to be visually confirmed.
